Meteorologist's View

Feeling very cold at height, be prepared with appropriate layers.

Forecast for Wednesday 20 Dec 2023

Weather: There will be frequent heavy showers during the early hours of Wednesday before a band of rain arrives from the west by morning, this generally light but lingers throughout the day. Very windy throughout.

Maximum wind: Westerly 20-25mph, gusting 35-45mph

Chance of cloud-free hill tops above 800m: 20%

Low cloud and visibility: Scattered or broken cloud base 500-700m, becoming broken or overcast when the rain band arrives. Visibility moderate in rain or showers, poor in hill fog.

Temperature: **Valleys:** Plus 7 rising to plus 10 Celsius
At 800m: Plus 2 rising to plus 5 Celsius
Freezing level: 1000m soon rising well above summits

Mountain Weather Forecast

Date: Monday 18 December. Location: Raise summit at 11:10. Full report: A similar day to the last couple of days in the Lakeland fells, which have been quite challenging. and defined by poor visibility, persistent light rain, and strong winds. With continued mild temperatures, many of the remaining snow patches have been thawing and the majority of the fells are snow-free. Any remaining snow patches are generally found above 750-800m on and around Helvellyn and its surrounding fells on north and east-facing slopes. Popular routes such as Striding and Swirral Edge are also snow-free. However, the temperature is forecast to drop tomorrow to around 900m and any precipitation may fall as snow on the higher tops. Anyone heading up high tomorrow should be prepared for a wintery day with windchill (feels-like temperature) well into minus figures. Full winter clothing (waterproofs, extra warm layers, hat & gloves), a map, compass, and headtorch are all essential. Microspikes and walking poles may also be a sensible addition to your rucksack. Temperature: plus 7.2C. Maximum wind speed 40.6mph. Wind chill: Plus 0.4C. Average wind speed: 32.2mph.
